

ClearPath® OS 2200 Software Series

Product Information Sheet

Highlights

- A complete, software-based version of the ClearPath OS 2200 operating environment that is deployable on industry-standard hardware and hypervisors.
- The core ClearPath OS 2200 attributes and defining characteristics are embedded in each deliverable
- ClearPath OS 2200 Software Series deliverables span midrange to premium workloads, application development and testing.

Your applications, your business

Success in the digital age means playing by a new set of rules. You have to be nimble and decisive. You have to capitalize on the latest trend at a moment's notice. And you have to constantly reimagine how you operate so you can stay relevant no matter the competitive pressures.

Because of this, applications have become the new differentiator. Applications are immensely important to your organization, and keeping them current, available and ready for use on several channels and devices is essential. It's how you'll keep enhancing your brand. And it's how you'll continue to bring more value to your business.

Making the application era your era

With the ClearPath® OS 2200 Software Series, you'll be able to participate in — and benefit from — this new “application era.” The ClearPath Software Series represents an evolutionary journey that will empower you to implement a fully featured, software-based version of the ClearPath OS 2200 environment in either a private or public cloud.

This way, you'll be able to seamlessly incorporate your applications into the rest of your infrastructure — be it a private or hybrid cloud, virtual environment, or software-defined data center — without foregoing the proven attributes you trust to run your business. And as a ClearPath OS 2200 user, you'll have access to several Software Series deliverables that work together to help you redefine how you create, release and manage your applications.

Powered by software

Whether you deploy it in your data center, a hypervisor, or your cloud, there is a ClearPath OS 2200 Software Series offering that's right for your business. Current deliverables include:

- **ClearPath OS 2200 Titanium:** A premium-capacity OS 2200 operating environment with full production-level capabilities to offer unparalleled deployment and business model flexibility.
- **ClearPath OS 2200 Platinum:** A complete OS 2200 operating environment built to support high-end production workloads and offer unparalleled deployment and business model flexibility.
- **ClearPath OS 2200 Gold:** All the same deployment and business model flexibility as ClearPath OS 2200 Titanium and Platinum but built to support mid-level production workloads.
- **ClearPath OS 2200 Developer Studio:** A complete development workspace to build, modernize and maintain OS 2200-based applications for OS 2200 Software Series and ClearPath Forward® Dorado production environments.

Your operations, refined

When you use the ClearPath OS 2200 Software Series, you'll have the flexibility to define — and just as easily redefine — the way the ClearPath OS 2200 processing environment supports and enables your organization's changing business and IT demands. With the freedom to choose how, when and where you incorporate your OS 2200 applications into the rest of your infrastructure, you'll find it easier to comply with your organization's hardware and cloud standards — all while you realize more value from the investments you've made in both technology and people.

And since the deliverables underpinning the ClearPath OS 2200 Software Series sustain the ClearPath Forward environment's defining attributes — including multilayered security, proven reliability and high-transaction-volume processing — you'll smoothly transition to a software-based world. You won't even have to rebuild or recompile your applications to accommodate this shift.

This way, you'll become more adaptable, more agile and better equipped to make sure your applications continue driving client satisfaction and competitive advantage.

- **Flexible Licensing Models:** ClearPath OS 2200 Titanium, Platinum, Gold and Developer Studio support a consumption model that enables you to pay for resources as you use them. Or you can license a fixed capacity model to address peak performance needs.
- **ClearPath OS 2200 QProcessor:** With this full, software-based implementation of the standard OS 2200 QProcessor, your OS 2200 Gold, Platinum, Titanium or Developer Studio instances will be able to interoperate with a wide variety of third-party systems that support IBM MQSeries® interconnectivity, giving you more ways to connect applications and the business processes they support.
