

Solution brief

Build a smarter, more sustainable workplace

Unisys Sustainable Workplace

Highlights

Track and prove environmental impact with ESG compliance reporting

Cut facility operating costs with smart space planning and intelligent energy controls

Manage building systems, security and operations through integration and automation

Lower real estate and operational costs by optimizing space using real-time occupancy data

Enable hybrid work with easy booking tools, secure access controls and personalized comfort settings with responsive workspace solutions

Modern-day offices contain valuable resources waiting to be optimized. Every space, system and energy source presents a chance for businesses to work smarter. With connected building controls and intelligent monitoring, organizations can turn these opportunities into measurable operational improvements.

The Sustainable Workplace solution helps eliminate multiple inefficiencies in the workplace. It uses environmental sensors and building controls to monitor usage, adjust settings and reduce waste automatically. Facility teams gain visibility and access to data and controls to better manage operations. Employees can easily book spaces and set comfort preferences. Stakeholders receive a clear aggregation of data, including space usage, costs and environmental impact.

This focused approach helps you create a workplace that optimizes costs, supports your staff and meets sustainability goals — all while reducing the time spent on day-to-day management.

Better spaces.
Better business.

Turn underused offices into high-performing spaces that save money, support your staff and meet sustainability targets.

Beyond basic building management

Sustainable Workplace helps you optimize operations while meeting sustainability targets with precision. By connecting room sensors with automated controls, the solution detects usage patterns, adjusts building systems in real time and gives stakeholders the data needed to make strategic decisions.

How you benefit

- **Reduced costs:** See exactly how your spaces are used and adjust accordingly. Optimize your real estate footprint while creating adaptable work areas that match your needs.
- **Improved employee experience:** Give staff control over their workspace comfort with automated lighting, temperature and air quality settings. Simplify hybrid work with easy-to-use booking tools and secure access controls.
- **Accelerated sustainability:** Meet environmental and ESG targets through automated controls that reduce energy and resource waste. Generate clear compliance reports demonstrating progress.
- **Streamlined operations:** Prevent issues before they occur with predictive maintenance alerts. Connect building systems, security controls and productivity tools under one management center.
- **Enhanced decision-making:** Gain practical insights from workspace analytics showing usage patterns, employee preferences and environmental metrics. Use real data to plan workplace improvements.

Why Unisys?

Organizations need cohesive solutions, not scattered technologies working in isolation. Unisys merges workplace management expertise with sustainable smart building systems to create a unified view of operations encompassing IT systems, staff experiences, resource consumption and space usage.

This holistic approach turns fragmented workplace data into actionable business intelligence. With proven experience in managed services and strong industry partnerships, Unisys empowers organizations to anticipate and solve workplace challenges, creating optimal environments for companies and their employees.
