

Align your applications with business needs

Unisys Application Managed Services

Highlights

End-to-end operational intelligence to optimize applications

Portfolio and business alignment through governance transparency, life cycle oversight and risk management

Streamlined service delivery with AI-powered proactive issue detection and resolution, AIOps, observability and performance management

AI-assisted development for incremental improvements, quality engineering and assurance

Vulnerability remediation for resilient, sustainable self-evolving systems

Security practices integrated in industry-leading frameworks and methodologies such as DevSecOps

Applications that enable seamless, uninterrupted operations and high performance throughout their life cycle create exceptional user experiences, strengthen data security and give your organization a competitive edge. Managing applications effectively requires continuous monitoring and updates, skilled expertise and the agility to adapt quickly to changing business needs.

Application Managed Services provides industry-leading AI-enhanced services that ensure seamless operation, superior performance and continuous improvements.

Our AI-powered approach combines portfolio management, autonomous operations, optimization services and intelligent service management. You benefit from proactive issue resolution, continuous system evolution, strategic portfolio alignment and streamlined service delivery. This empowers your organization to reduce its technical debt while operating with agility, resilience and clarity.

Manage business applications effectively

Operate applications efficiently to advance your organization's initiatives with the agility, performance, scalability and security your business demands.

How you benefit

- **Operational excellence:** Ensure applications operate smoothly and deliver consistent value while your organization focuses on core business priorities. Streamlined operations reduce redundancies, optimize processes and elevate user experience through faster issue resolution and better resource allocation.
- **AI-driven intelligence:** Harness autonomous operations with AI-powered development for quality engineering, vulnerability remediation and intelligent service management. AI accelerators automate security checks, enable proactive issue detection and provide AI-assisted request handling, incident management and root cause analysis for self-improving systems.
- **Security and compliance confidence:** Mitigate risks with security integrated throughout application development and operations. Automated compliance checks accelerate time-to-market while meeting industry standards, including HIPAA, FISMA and GDPR, reducing vulnerability to security breaches and data leaks.
- **Strategic business alignment:** Optimize decision-making through AI-powered portfolio management combined with performance reporting. Technical debt reduction, impact analysis and transparent governance ensure continuous alignment with business goals while driving strategic value and operational efficiency.
- **Continuous evolution:** Benefit from innovative feedback loops between application performance monitoring, application life cycle management and IT service management. This creates resilient systems that adapt intelligently to changing environments and deliver ongoing enhancements throughout the application lifespan.
- **Technical debt reduction:** Reduce operational risk, accelerate innovation and drive capacity for AI-powered transformation. This proactive approach lowers long-term costs, improves agility and optimizes technology investments for sustained business value while maximizing efficiency and minimizing outages.

Why Unisys?

Unisys brings deep application management expertise and AI-powered innovation directly to your business to satisfy both your operational requirements and your customers' expectations. As a trusted service provider, Unisys streamlines your operations by leveraging our skilled talent, industry and function-based accelerators, and an extensive partner ecosystem. We deliver flexible engagement models — working directly with organizations or alongside partners such as Microsoft, AWS, Google, ServiceNow and Oracle. Unisys also partners with startups, and all these partnerships enhance our ability to deliver scalable, secure, and outcome-driven solutions across the public sector, financial services, retail and other regulated industries. Our approach draws on industry-specific intellectual property and specialized domain knowledge tailored to each vertical's unique operational and regulatory requirements.

Increase regulatory compliance

Benefit from intelligent service management and autonomous operations that reduce operational risk, meet regulatory compliance and drive continuous improvement.
